Product Details

| Immunogen: | Recombinant fragment (around aa 69-194) of human Thrombomodulin (CD141) protein (exact sequence is proprietary) |
|--------------|---|
| Clone: | THBD-1591 |
| Isotype: | lgG2b kappa |
| Specificity: | It recognizes a protein of 75 kDa, identified as Thrombomodulin. Thrombomodulin is a |
| | transmembrane glycoprotein with natural anticoagulant properties. It is normally expressed by |
| | a restricted number of cells, such as endothelial and mesothelial cells. In addition, synovial |
| | lining and syncytio-trophoblasts of placenta also express thrombomodulin. This protein is |
| | present in almost all of benign vascular tumors and majority of malignant vascular tumors |
| | (Kaposi's sarcoma, angiosarcoma, and epithelioid hemangioendothelioma). Hence, anti- |

Protein Array

Image 2. Analysis of Protein Array containing >19,000 fulllength human proteins using Thrombomodulin/CD141 Mouse Monoclonal Antibody (THBD/1591) Z- and S- Score: The Z-score represents the strength of a signal that a monoclonal antibody (MAb) (in combination with a fluorescently-tagged anti-IgG secondary antibody) produces when binding to a particular protein on the HuProtTM array. Z-scores are described in units of standard deviations (SD's) above the mean value of all signals generated on that array. If targets on HuProtTM are arranged in descending order of the Z-score, the S-score is the difference (also in units of SD's) between the Z-score. S-score therefore represents the relative target specificity of a MAb to its intended target. A MAb is considered to specific to its intended target, if the MAb has an S-score of at least 2.5. For example, if a MAb binds to protein X with a Z-score of 43 and to protein Y with a Z-score of 14, then the S-score for the binding of that MAb to protein X is equal to 29.
