## Target Details

Target:	RCAS1 (EBAG9)
Alternative Name:	EBAG9 (EBAG9 Products)
Background:	EBAG9, also known as RCAS1, is an estrogen-transcribed protein. Soluble and membranous RCAS1 proteins may play a role in the immune escape of tumor cells by promoting T
	lymphocyte inhibition of growth and apoptosis. RCAS1 is expressed in a wide variety of
	cancers, including uterine, ovarian, and lung cancer cells, and acts as a ligand for a putative

	receptor present on peripheral lymphocytes. RCAS1 is highly expressed not only in cancer cells
	but also in non-tumor bile duct cells subject to immune attack. RCAS1 inhibits the in vitro
	growth of receptor-expressing cells and induces apoptosis, contributing to the ability of tumor
	cells to evade host immune surveillance. High expression of RCAS1 significantly correlates with
	tumor progression and with poor outcome for many cancer patients.
