Datasheet for ABIN6941111 Recombinant anti-CD20 antibody

5 Images

Overview

Quantity:	100 µg
Target:	CD20 (MS4A1)
Reactivity:	Human
Host:	Mouse
Antibody Type:	Recombinant Antibody
Clonality:	Monoclonal
Conjugate:	This CD20 antibody is un-conjugated
Application:	Flow Cytometry (FACS), Immunofluorescence (IF), Immunohistochemistry (IHC), Staining Methods (StM)

Product Details

Immunogen:	Recombinant full-length human MS4A1 fragment
Clone:	RIGEL-773
lsotype:	IgG1 kappa
Specificity:	Recognizes a protein of 30-33 kDa, which is identified as CD20. It is a non-Ig differentiation antigen of B-cells and its expression is restricted to normal and neoplastic B-cells, being absent from all other leukocytes and tissues. CD20 is expressed by pre-B-cells and persists during all stages of B-cell maturation but is lost upon terminal differentiation into plasma cells. This MAb can be used for immunophenotyping of leukemia and malignant cells, B lymphocyte detection in peripheral blood and B cell localization in tissues. It reacts with the majority of B-cells present in peripheral blood and lymphoid tissues and their derived lymphomas. In lymphoid tissue,

	germinal center blasts and B-immunoblasts are particularly reactive. It is a reliable antibody for
	ascribing a B-cell phenotype in known lymphoid tissues. Rarely, CD20-positive T-cell
	lymphomas have been reported. Reactivity has also been noted with Reed-Sternberg cells in
	cases of Hodgkin s disease, particularly of lymphocyte predominant type.
Purification:	Purified by Protein A/G

Target Details

-	
Target:	CD20 (MS4A1)
Alternative Name:	MS4A1 (MS4A1 Products)
Molecular Weight:	33-37kDa
Gene ID:	931
UniProt:	P11836

Application Details

Application Notes:	Positive Control: Daudi, Raji or U266 (FACS). Human lymphocytes. Lymph node and tonsil (IHC). Known Application: Immunofluorescence (1-2 µg/mL), Flow Cytometry (1-2 µg/million cells), ,Immunohistochemistry (Formalin-fixed) (0.5-1 µg/mL for 30 minutes at RT),(Staining of formalin-fixed tissues requires boiling tissue sections in 10 mM citrate buffer, pH 6.0, for 10- 20 min followed by cooling at RT for 20 minutes),Optimal dilution for a specific application should be determined.
Restrictions:	For Research Use only
Handling	
Concentration:	200 µg/mL
Buffer:	10 mM PBS with 0.05 % BSA & 0.05 % azide.
Preservative:	Sodium azide
Precaution of Use:	This product contains Sodium azide: a POISONOUS AND HAZARDOUS SUBSTANCE which
	should be handled by trained staff only.
Storage:	4 °C,-80 °C
Storage Comment:	Antibody with azide - store at 2 to 8°C. Antibody without azide - store at -20 to -80°C. Antibody
	is stable for 24 months. Non-hazardous. No MSDS required.

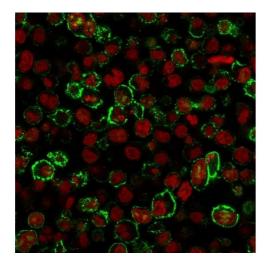

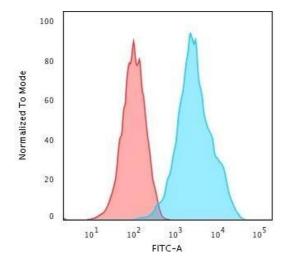

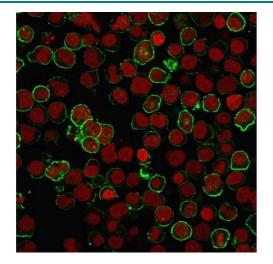

Image 1. Analysis of Protein Array containing more than 19,000 full-length human proteins using CD20 Monospecific Recombinant Mouse Monoclonal Antibody (rIGEL/773). Zand S- Score: The Z-score represents the strength of a signal that a monoclonal antibody (MAb) (in combination with a fluorescently-tagged anti-IgG secondary antibody) produces when binding to a particular protein on the HuProtTM array. Z-scores are described in units of standard deviations (SD's) above the mean value of all signals generated on that array. If targets on HuProtTM are arranged in descending order of the Z-score, the S-score is the difference (also in units of SD's) between the Z-score. Sscore therefore represents the relative target specificity of a MAb to its intended target. A MAb is considered to specific to its intended target, if the MAb has an S-score of at least 2.5. For example, if a MAb binds to protein X with a Z-score of 43 and to protein Y with a Z-score of 14, then the S-score for the binding of that MAb to protein X is equal to 29.

Flow Cytometry

Image 2. Flow Cytometric Analysis of Raji cells using CD20 Mouse Recombinant Monoclonal Antibody (rIGEL/773) followed by Goat anti-Mouse IgG-CF488 (Blue); Isotype Control (Red).
