### Overview

Quantity:	100 µg
Target:	CD68
Binding Specificity:	AA 150-221
Reactivity:	Human
Host:	Mouse
Clonality:	Monoclonal
Conjugate:	This CD68 antibody is un-conjugated
Application:	Immunohistochemistry (IHC), Staining Methods (StM)

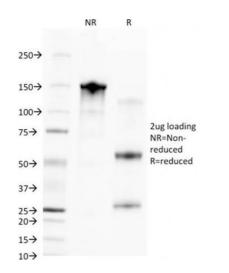

# Product Details

Immunogen:	Recombinant fragment of human CD68 protein (around aa 150-221) (exact sequence is proprietary)
Clone:	C68-2709
Isotype:	IgG2b kappa
Specificity:	This antibody recognizes a glycoprotein of 110 kDa, which is identified as CD68. It is important
	for identifying macrophages in tissue sections. It stains macrophages in a wide variety of
	human tissues, including Kupffer cells and macrophages in the red pulp of the spleen, in lamina
	propria of the gut, in lung alveoli, and in bone marrow. It reacts with myeloid precursors and
	peripheral blood granulocytes. It also reacts with plasmacytoid T cells, which are supposed to
	be of monocyte/macrophage origin. It shows strong granular cytoplasmic staining of chronic
	and acute myeloid leukemia and also reacts with rare cases of true histiocytic neoplasia.

#### **Protein Array**

Image 2. Analysis of Protein Array containing >19,000 fulllength human proteins using CD68 Mouse Monoclonal Antibody (C68/2709) Z- and S- Score: The Z-score represents the strength of a signal that a monoclonal antibody (MAb) (in combination with a fluorescently-tagged anti-IgG secondary antibody) produces when binding to a particular protein on the HuProtTM array. Z-scores are described in units of standard deviations (SDs) above the mean value of all signals generated on that array. If targets on HuProtTM are arranged in descending order of the Zscore, the S-score is the difference (also in units of SDs) between the Z-score. S-score therefore represents the relative target specificity of a MAb to its intended target. A MAb is considered to specific to its intended target, if the MAb has an S-score of at least 2.5. For example, if a MAb binds to protein X with a Z-score of 43 and to protein Y with a Z-score of 14, then the S-score for the binding of that MAb to protein X is equal to 29.
