Product Details

Immunogen:	Synthetic peptide common among human muscle actins
Clone:	MSA-953
Isotype:	lgG1 kappa
Specificity:	This antibody recognizes actin of skeletal, cardiac, and smooth muscle cells. It is not reactive
	with other mesenchymal cells except for myoepithelium. Actin can be resolved on the basis of
	its isoelectric points into three distinctive components: alpha, beta, and gamma in order of
	increasing isoelectric point. Anti-muscle specific actin recognizes alpha and gamma isotypes of
	all muscle groups. Non-muscle cells such as vascular endothelial cells and connective tissues
	are non-reactive. Also, neoplastic cells of non-muscle-derived tissue such as carcinomas,
	melanomas, and lymphomas are negative.It stains tumors of smooth muscle (leiomyomas and
	leiomyosarcomas) as well as skeletal muscle (rhabdomyomas and rhabdomyosarcomas).
Purification:	Purified by Protein A/G
