# Product Details

| Immunogen:   | Purified human CA19-9 protein   |
|--------------|---|
| Clone:       | CA19-9-1390R  |
| Isotype:     | lgG   |
| Specificity: | CA19-9, a carbohydrate epitope expressed on a high MW (400 kDa) mucin glycoprotein, is a              |
|              | sialyl Lewisa structure which is synthesized from type 1 blood group precursor chains and is          |
|              | present in individuals expressing the Lewisa and/or Lewisb blood group antigens. In normal            |
|              | tissues, sialyl Lewisa antigen is present in ductal epithelium of the breast, kidney, salivary gland, |
|              | and sweat glands. Its expression is greatly enhanced in serum as well as in the majority of           |
|              | tumor cells in gastrointestinal (GI) carcinomas, including adenocarcinomas of the stomach,            |
|              | intestine, and pancreas. Preoperative elevated CA19-9 levels in patients with stage I pancreatic      |
|              | carcinoma decrease to normal values following surgery. When used serially, CA19-9 can predict         |
|              | recurrence of disease prior to radiographic or clinical findings. This MAb is excellent for staining  |
|              | of formalin-fixed, paraffin-embedded tissues.   |
