Alternative Name:	Centaurin alpha 2 (ADAP2 Products)			
Background:	Synonyms: ADAP2, ADAP2_HUMAN, Arf-GAP with dual PH domain-containing protein 2, ArfGAF			
	with dual PH domains 2, cent b, Centa 2, CENTA2, Centaurin alpha 2, Centaurin alpha 2 protein,			
	Centaurin beta, Centaurin-alpha-2, Cnt-a2, HSA272195.			
	Background: The ADP-ribosylation factor (ARF) family of small GTP-binding proteins are			
	involved in vesicular transport regulation and in controlling cytoskeletal organization and cell			
	adhesion. The Centaurin GTPase-activating protein family comprise a subset of ARF regulatory			
	molecules that transduce PI 3-kinase activation into coordinated control of ARF-dependent			
	pathways. This family includes ASAP1, ACAP1, ACAP2, AGAP1, ARAP1, ARAP2, Centaurin a1,			
	Centaurin g3 and the recently discovered Centaurin a2. Expressed in a wide variety of tissues			
	such as fat, heart and skeletal muscle, Centaurin a2 is thought to negatively regulate ARF-			
	mediated actin rearrangement by binding activated PI 3-kinase. Although the exact function of			
	Centaurin a2 is not yet known, its high sequence similarity with Centaurin a1 suggests that it			
	may also act as an ARF6 GTPase.
