Background:	Synonyms: CDC31 homolog, CEN 3, CEN3, Centrin EF hand protein 3, Centrin-3, Centrin3, CETN		
	3, Cetn3, CETN3_HUMAN, EF hand superfamily member, MGC12502, MGC138245.		
	Background: The protein encoded by this gene contains four EF-hand calcium binding domains,		
	and is a member of the centrin protein family. Centrins are evolutionarily conserved proteins		
	similar to the CDC31 protein of S. cerevisiae. Yeast CDC31 is located at the centrosome of		
	interphase and mitotic cells, where it plays a fundamental role in centrosome duplication and		
	separation. Multiple forms of the proteins similar to the yeast centrin have been identified in		
	human and other mammalian cells, some of which have been shown to be associated with		
	centrosome fractions. This protein appears to be one of the most abundant centrins associated		
	with centrosome, which suggests a similar function to its yeast counterpart. [provided by
