	similarity 127, member A, Mammalian retrotransposon derived protein 8C, Mar8, MAR8C,		
	Mart8, MART8C, CXX1_HUMAN.		
	Background: The X and Y chromosomes are the human sex chromosomes. Chromosome X		
	consists of about 153 million base pairs and nearly 1,000 genes. The combination of an X and Y $$		
	chromosome lead to normal male development while two copies of X lead to normal female		
	development. There are a number of conditions related to an unsual number and combination		
	of sex chromosomes being inherited. More than one copy of the X chromosome with a Y		
	chromosome causes Klinefelter's syndrome. A single copy of X alone leads to Turner's		
	syndrome. More than 2 copies of the X chromosome, in the absence of a Y chromosome, is		
	known as Triple X syndrome. Color blindness, hemophilia, and Duchenne muscular dystrophy		
	are well known X chromosome-linked conditions which affect males more frequently as males		
	carry a single X chromosome. The CXX1 gene product has been provisionally designated CXX1		
	pending further characterization.
