DEXI (DEXI Products)

Target Details

Background:	Synonyms: Dexamethasone-induced protein, DEXI, DEXI_HUMAN, MYLE, Protein MYLE.
	Background: DEXI is a 95 amino acid protein belonging to the DEXI family. Induced by
	dexamethasone, DEXI is expressed in brain, liver, pancreas, placenta and lung, with highest
	levels in heart. DEXI is also up-regulated in emphysematous lung compared to normal lung. The
	gene encoding DEXI maps to human chromosome 16, which encodes over 900 genes and
	comprises nearly 3 % of the human genome. The GAN gene is located on chromosome 16 and,
	with mutation, may lead to giant axonal neuropathy, a nervous system disorder characterized
	by increasing malfunction with growth. The rare disorder Rubinstein-Taybi syndrome is also
	associated with chromosome 16, as is Crohn's disease, a gastrointestinal inflammatory
	condition.
