## Target Details

Background:	<p>Synonyms: 90 kDa diacylglycerol kinase, DAG kinase beta, DAGK2, DGK, DGK B, DGK beta, DGK-beta, Dgkb, DGKB_HUMAN, Diacylglycerol kinase beta (90kD), Diacylglycerol kinase beta 90 kDa, Diacylglycerol kinase beta, Diglyceride kinase beta, KIAA0718.</p> <p>Background: Diacylglycerol kinases (DGKs) are regulators of the intracellular concentration of the second messenger diacylglycerol (DAG) and thus play a key role in cellular processes. Nine mammalian isotypes have been identified, which are encoded by separate genes. Mammalian DGK isozymes contain a conserved catalytic (kinase) domain and a cysteine-rich domain (CRD). The protein encoded by this gene is a diacylglycerol kinase, beta isotype. Two alternatively spliced transcript variants have been found for this gene. [provided by RefSeq, Jul 2008]</p>
