Target Details		
Background:	Synonyms: DDX30, DEAH box protein 30, Dhx30, DHX30_HUMAN, FLJ11214, KIAA0890,	
	Putative ATP-dependent RNA helicase DHX30, Ret CoR.	
	Background: DEAD box proteins, characterized by the conserved motif Asp-Glu-Ala-Asp (DEAD),	
	are putative RNA helicases. They are implicated in a number of cellular processes involving	
	alteration of RNA secondary structure such as translation initiation, nuclear and mitochondrial	
	splicing, and ribosome and spliceosome assembly. Based on their distribution patterns, some	
	members of this DEAD box protein family are believed to be involved in embryogenesis,	
	spermatogenesis, and cellular growth and division. The family member encoded by this gene is	
	a mitochondrial nucleoid protein that associates with mitochondrial DNA. It has also been	
	identified as a component of a transcriptional repressor complex that functions in retinal	
	development, and it is required to optimize the function of the zinc-finger antiviral protein.	
	Alternatively spliced transcript variants have been found for this gene. [provided by RefSeq, Feb
