Background:	Synonyms: DDX33, DHX33_HUMAN, DEAD box polypeptide 33, DEAD/H (Asp Glu Ala Asp/His)		
	box polypeptide 33, DEAH (Asp Glu Ala His) box polypeptide 33, DEAH box protein 33,		
	FLJ21972.		
	Background: This gene encodes a member of the DEAD box protein family. The DEAD box		
	proteins are characterized by the conserved motif Asp-Glu-Ala-Asp (DEAD), are putative RNA		
	helicases. They are implicated in a number of cellular processes involving alteration of RNA		
	secondary structure such as translation initiation, nuclear and mitochondrial splicing, and		
	ribosome and spliceosome assembly. Based on their distribution patterns, some members of		
	this DEAD box protein family are believed to be involved in embryogenesis, spermatogenesis,		
	and cellular growth and division. Alternative splicing results in multiple transcript variants.
