Target Details	
Background:	Synonyms: LIPA2_HUMAN, Liprin-alpha-2, PPFIA2, Protein tyrosine phosphatase receptor type f
	polypeptide interacting protein alpha 2, Protein tyrosine phosphatase receptor type f
	polypeptide-interacting protein alpha-2, Protein tyrosine phosphatase, receptor type, f
	polypeptide (PTPRF), interacting protein (liprin), alpha 2, PTPRF interacting protein alpha 2,
	PTPRF-interacting protein alpha-2.
	Background: The protein encoded by this gene is a member of the LAR protein-tyrosine
	phosphatase-interacting protein (liprin) family. Liprins interact with members of LAR family of
	transmembrane protein tyrosine phosphatases, which are known to be important for axon
	guidance and mammary gland development. It has been proposed that liprins are multivalent
	proteins that form complex structures and act as scaffolds for the recruitment and anchoring
	of LAR family of tyrosine phosphatases. This protein has been shown to bind the
	calcium/calmodulin-dependent serine protein kinase (MAGUK family) protein (also known as
	CASK) and proposed to regulate higher-order brain functions in mammals. Alternative splicing
	results in multiple transcript variants. [provided by RefSeq, Sep 2013]
