Alternative Name:	MMP13 (MMP13 Products)
Background:	Synonyms: CLG 3, CLG3, Collagenase 3, Collagenase3, MMP13, MMP 13, MMP-13, Matrix Metalloproteinase 13, MMP 13, MMP13_HUMAN. Background: Proteins of the matrix metalloproteinase (MMP) family are involved in the breakdown of extracellular matrix in normal physiological processes, such as embryonic development, reproduction, and tissue remodeling, as well as in disease processes, such as arthritis and metastasis. Most MMP's are secreted as inactive proproteins which are activated when cleaved by extracellular proteinases. The protein encoded by this gene cleaves type II collagen more efficiently than types I and III. It may be involved in articular cartilage turnover and cartilage pathophysiology associated with osteoarthritis. The gene is part of a cluster of MMP genes which localize to chromosome 11q22.3.
