## Datasheet for ABIN6944517 anti-PEX5 antibody (AA 51-150) (FITC)

Overview

| Quantity:            | 100 μL  |
|----------------------|---|
| Target:              | PEX5  |
| Binding Specificity: | AA 51-150   |
| Reactivity:          | Mouse   |
| Host:                | Rabbit  |
| Clonality:           | Polyclonal  |
| Conjugate:           | This PEX5 antibody is conjugated to FITC  |
| Application:         | Immunofluorescence (Cultured Cells) (IF (cc)), Immunofluorescence (Paraffin-embedded Sections) (IF (p)) |

## Product Details

| Immunogen:            | KLH conjugated synthetic peptide derived from human PEX5 |
|-----------------------|--|
| Isotype:              | lgG  |
| Cross-Reactivity:     | Mouse  |
| Predicted Reactivity: | Human,Rat,Dog,Cow,Sheep,Pig,Horse                        |
| Purification:         | Purified by Protein A.                                   |
| Target Details        |  |
| Target:               | PEX5   |

| l'arget:          | PEX5                 |

|                | Background: The product of this gene binds to the C-terminal PTS1-type tripeptide peroxisomal      |
|                | targeting signal (SKL-type) and plays an essential role in peroxisomal protein import. Peroxins    |
|                | (PEXs) are proteins that are essential for the assembly of functional peroxisomes. The             |
|                | peroxisome biogenesis disorders (PBDs) are a group of genetically heterogeneous autosomal          |
|                | recessive, lethal diseases characterized by multiple defects in peroxisome function. The           |
|                | peroxisomal biogenesis disorders are a heterogeneous group with at least 14 complementation        |
|                | groups and with more than 1 phenotype being observed in cases falling into particular              |
|                | complementation groups. Although the clinical features of PBD patients vary, cells from all PBD    |
|                | patients exhibit a defect in the import of one or more classes of peroxisomal matrix proteins      |
|                | into the organelle. Defects in this gene are a cause of neonatal adrenoleukodystrophy (NALD), a    |
|                | cause of Zellweger syndrome (ZWS) as well as may be a cause of infantile Refsum disease            |
|                | (IRD). Alternatively spliced transcript variants encoding different isoforms have been identified. |
