Background:	Synonyms: Catenin 4 , Catenin4 , FLJ31261 , FLJ42243 , p0071 , PKP 4 , PKP4 , PKP4_HUMAN , Plakophilin-4 , Plakophilin4.	
	Background: Armadillo-like proteins are characterized by a series of armadillo repeats, first	
	defined in the Drosophila 'armadillo' gene product, that are typically 42 to 45 amino acids in	
	length. These proteins can be divided into subfamilies based on their number of repeats, their	
	overall sequence similarity, and the dispersion of the repeats throughout their sequences.	
	Members of the p120(ctn)/plakophilin subfamily of Armadillo-like proteins, including CTNND1,	
	CTNND2, PKP1, PKP2, PKP4, and ARVCF. PKP4 may be a component of desmosomal plaque	
	and other adhesion plaques and is thought to be involved in regulating junctional plaque	
	organization and cadherin function. Multiple transcript variants encoding different isoforms	
	have been found for this gene. [provided by RefSeq, Feb 2015]
