Alternative Name:	PTPN12 (PTPN12 Products)
Background:	Synonyms: Protein tyrosine phosphatase G1, Protein tyrosine phosphatase non receptor type
	12, Protein-tyrosine phosphatase G1, PTN12_HUMAN, PTP PEST, PTP-PEST, PTPG1, Ptpn12,
	Tyrosine protein phosphatase non receptor type 12, Tyrosine-protein phosphatase non-receptor
	type 12.
	Background: The protein encoded by this gene is a member of the protein tyrosine phosphatas
	(PTP) family. PTPs are signaling molecules that regulate a variety of cellular processes
	including cell growth, differentiation, mitotic cycle, and oncogenic transformation. This PTP
	contains a C-terminal PEST motif, which serves as a protein-protein interaction domain, and
	may regulate protein intracellular half-life. This PTP was found to bind and dephosphorylate the
	product of the oncogene c-ABL and thus may play a role in oncogenesis. This PTP was also
	shown to interact with, and dephosphorylate, various products related to cytoskeletal structure
	and cell adhesion, such as p130 (Cas), CAKbeta/PTK2B, PSTPIP1, and paxillin. This suggests it
	has a regulatory role in controlling cell shape and mobility. Alternative splicing results in
	multiple transcript variants encoding distinct isoforms. [provided by RefSeq, Oct 2008]
