Alternative Name:	Transition Protein 1 (TNP1 Products)
Background:	<p>Synonyms: 551G9.2, Anti Eukaryotic Release Factor 3a, Anti G1 to S phase transition 1, Anti GST1, homolog of yeast, eRF 3a, eRF3a, G1 to S phase transition 1, G1 to S phase transition protein 1 homolog, G1 to S phase transition protein, GSPT 1, GSPT1, GST 1, GST1, GTP binding protein GST1 HS, Transition protein 1, ERF3A_MOUSE.</p> <p>Background: eRF3a is a 499 amino acid protein that belongs to the GTP-binding elongation factor family and is involved in the regulation of cell growth, specifically via control of translation termination. Human eRF3a shares 94 % sequence identity with its mouse counterpart, suggesting a conserved function between species. The gene encoding eRF3a maps to human chromosome 16, which encodes over 900 genes and comprises nearly 3 % of the human genome. The GAN gene is located on chromosome 16 and, with mutation, may lead to giant axonal neuropathy, a nervous system disorder characterized by increasing malfunction with growth. The rare disorder Rubinstein-Taybi syndrome is also associated with chromosome 16, as is Crohn's disease, which is a gastrointestinal inflammatory condition.</p>
