The protein encoded</li> <li>by this gene is a component of a large multimeric complex, termed the retromer complex,</li> <li>which is involved in retrograde transport of proteins from endosomes to the trans-Golgi</li> <li>network. This VPS protein may be involved in the formation of the inner shell of the retromer</li> <li>coat for retrograde vesicles leaving the prevacuolar compartment. Alternative splice variants</li> <li>encoding different isoforms and representing non-protein coding transcripts have been found</li> <li>for this gene. [provided by RefSeq, Aug 2013]</li> </ul>
