Background:	Synonyms: FLJ14848, hVPS 33B, hVPS33B, Vacuolar protein sorting 33 homolog B (yeast),
	Vacuolar protein sorting 33 homolog B, Vacuolar protein sorting 33B (yeast), Vacuolar protein
	sorting 33B, Vacuolar protein sorting associated protein 33B, VPS 33B.
	Background: Vesicle mediated protein sorting plays an important role in segregation of
	intracellular molecules into distinct organelles. Genetic studies in yeast have identified more
	than 40 vacuolar protein sorting (VPS) genes involved in vesicle transport to vacuoles. This
	gene is a member of the Sec-1 domain family, and encodes the human ortholog of rat Vps33b
	which is homologous to the yeast class C Vps33 protein. The mammalian class C vacuolar
	protein sorting proteins are predominantly associated with late endosomes/lysosomes, and like
	their yeast counterparts, may mediate vesicle trafficking steps in the endosome/lysosome
	pathway. Mutations in this gene are associated with arthrogryposis-renal dysfunction-
	cholestasis syndrome. Alternative splicing results in multiple transcript variants. [provided by
