Quantity:	50 μg	
Target:	SARS-CoV-2 Spike S1	
Binding Specificity:	RBD	
Reactivity:	SARS Coronavirus-2 (SARS-CoV-2), SARS Coronavirus (SARS-CoV)	
Host:	Human	
Antibody Type:	Recombinant Antibody	
Clonality:	Monoclonal	
Conjugate:	This SARS-CoV-2 Spike S1 antibody is un-conjugated	
	ELISA, Immunofluorescence (IF), Surface Plasmon Resonance (SPR), Crystallization (Crys)	
Application:	ELISA, Immunofluorescence (IF), Surface Plasmon Resonance (SPR), Crystallization (Crys)	
Application: Product Details	ELISA, Immunofluorescence (IF), Surface Plasmon Resonance (SPR), Crystallization (Crys)	
	Recombinant monoclonal antibody to COVID-19 & SARS-CoV S glycoprotein.	
Product Details		
Product Details Purpose:	Recombinant monoclonal antibody to COVID-19 & SARS-CoV S glycoprotein.	
Product Details Purpose:	Recombinant monoclonal antibody to COVID-19 & SARS-CoV S glycoprotein. The original monoclonal antibody was generated through an scFv library derived from a	
Product Details Purpose: Immunogen:	Recombinant monoclonal antibody to COVID-19 & SARS-CoV S glycoprotein. The original monoclonal antibody was generated through an scFv library derived from a peripheral blood lymphocytes of a patient exposed to the SARS-CoV.	
Product Details Purpose: Immunogen: Clone:	Recombinant monoclonal antibody to COVID-19 & SARS-CoV S glycoprotein. The original monoclonal antibody was generated through an scFv library derived from a peripheral blood lymphocytes of a patient exposed to the SARS-CoV. CR3022	
Product Details Purpose: Immunogen: Clone: Isotype:	Recombinant monoclonal antibody to COVID-19 & SARS-CoV S glycoprotein. The original monoclonal antibody was generated through an scFv library derived from a peripheral blood lymphocytes of a patient exposed to the SARS-CoV. CR3022 IgM kappa

Product Details Purpose: Immunogen: Clone: Isotype:	Recombinant monoclonal antibody to COVID-19 & SARS-CoV S glycoprotein. The original monoclonal antibody was generated through an scFv library derived from a peripheral blood lymphocytes of a patient exposed to the SARS-CoV. CR3022 IgM kappa The antibody CR3022 binds the amino acids 318-510 in the S1 domain of the SARS-CoV Spike protein as well as SARS-CoV-2 (COVID-19) Spike protein. The antibody also binds to P462L-	

Product Details		
	CR3022 epitope does not overlap with the ACE2-binding site. It does thus not hinder binding of neutralizing antibodies. While CR3022 on its own exhibits only a weak neutralizing effect, it has been shown to synergize with other S-protein RBD binding antibodies to neutralize SARS-CoV. This effect still has to be confirmed in context with SARS-CoV-2 (Yuan et al. 2020).	
Cross-Reactivity (Details):	The anti-SARS-CoV-2 antibody CR3022 was originally discovered in a SARS patient, but it was shown to be a potent binder of SARS-CoV-2 spike protein (S1).	
Characteristics:	Original Species of Ab: Human Original Format of Ab: IgG1	
Purification:	Affinity Purified using a recombinant lectin column	
Target Details		
Target:	SARS-CoV-2 Spike S1	
Abstract:	SARS-CoV-2 Spike S1 Products	
Target Type:	Viral Protein	
Background:	Spike protein, COVID19, COVID 19, S protein, SARS-CoV S protein, S glycoprotein, E2, Peplomer protein, Spike protein S1, SARS Coronavirus, SARS-CoV-2, SARS CoV 2, 2019-nCoV, Ab1680.10, Ab1680.15, Ab1680.16	
UniProt:	P59594	
Application Details		
Application Notes:	This antibody binds to both SARS-CoV and SARS-CoV-2 with high affinity (PMID: 16796401 & 32065055). The initial characterization of the binding of this antibody was performed by ELISA and indicates potential for the development of diagnostic assays, as both virus-capture assays or as controls in serological assays measuring immune-responses to virus exposure. Human	

This antibody binds to both SARS-CoV and SARS-CoV-2 with high affinity (PMID: 16796401 & 32065055). The initial characterization of the binding of this antibody was performed by ELISA and indicates potential for the development of diagnostic assays, as both virus-capture assays, or as controls in serological assays measuring immune-responses to virus exposure. Human IgG1, IgG3, IgM and IgA isotypes are available to mimic antibody responses seen in COVID19 < a href="https://www.medrxiv.org/content/10.1101/2020.03.17.20037713v1" target="_blank">(Amanat et al. 2020). Human IgG2 and IgG4 subtypes, which are also seen in a small subset of COVID-19 patients, are also available to investigate their role in the response to SARS-CoV-2. The original human IgG1 version of the antibody works synergistically in combination with another non-ompeting SARS antibody CR3014 and is a potential candidate for passive immune prophylaxis of SARS-CoV infection (Meulen et al., 2006). The original antibody (human IgG1) was also reported to bind the 2019-nCoV RBD (KD of 6.3 nM). This

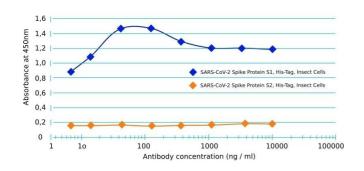

Application Details

	antibody has been attributed a potential to be developed as a therapeutic agent, alone or in combination with other neutralizing antibodies for treatment of 2019-nCoV infections (Tian et al., 2020). Bates et al. 2021 (PMID: 32766589) used CR3022 in a immunofluorescence assay.
Comment:	This reformatted human antibody was made using the variable domain sequences of the original Human IgG1 format, for improved compatibility with existing reagents, assays and techniques.
Restrictions:	For Research Use only

Handling

Format:	Liquid
Concentration:	1 mg/mL
Buffer:	PBS with 0.02 % Proclin 300.
Preservative:	ProClin
Precaution of Use:	This product contains ProClin: a POISONOUS AND HAZARDOUS SUBSTANCE which should be handled by trained staff only.
Storage:	4 °C,-20 °C
Storage Comment:	Store at 4°C for up to 3 months. For longer storage, aliquot and store at -20°C.

Validation report #104441 for Multiplex Immunohistochemistry (mIHC)

ELISA

Image 1. Binding curve of anti-COVID-19 & SARS-CoV S glycoprotein antibody CR3022 to SARS-CoV-2 Spike Glycoprotein domains S1 and S2 (His-Tag (Insect Cells)). ELISA plate coated with SARS-CoV-2 Spike Glycoprotein (S1), His-Tag (Insect Cells, grey line) and SARS-CoV-2 Spike Glycoprotein (S2), His-Tag (Insect Cells, green line) at concentrations of $5 \mu g/mL$. A 3-fold serial dilution from 10000 ng/mL was performed using ABIN6953042. Human IgM is HRP-conjugated.
