Target Details

	Description: This gene encodes a member of the TNF-receptor superfamily. The encoded
	receptor has been shown to have increased expression upon T-cell activation, and it is thought
	to play a key role in dominant immunological self-tolerance maintained by CD25(+)CD4(+)
	regulatory T cells. Knockout studies in mice also suggest the role of this receptor is in the
	regulation of CD3-driven T-cell activation and programmed cell death. Three alternatively
	spliced transcript variants of this gene encoding distinct isoforms have been reported.
Molecular Weight:	predicted molecular mass of 50-52 kDa after removal of the signal peptide.
Gene ID:	8784
UniProt:	Q9Y5U5
Pathways:	Cancer Immune Checkpoints
Application Details	
Application Notes:	Optimal working dilution should be determined by the investigator.
Restrictions:	For Research Use only
