Datasheet for ABIN6974418 SAA1 ELISA Kit

Image

Overview

Quantity:	96 tests
Target:	SAA1
Reactivity:	Sheep
Method Type:	Competition ELISA
Detection Range:	1.875 ng/mL - 120 ng/mL
Minimum Detection Limit:	1.875 ng/mL
Application:	ELISA

Product Details

Purpose:	For the quantitative determination of sheep serum amyloid A(SAA) concentrations in serum, plasma, tissue homogenates.
Sample Type:	Plasma, Serum, Tissue Homogenate
Analytical Method:	Quantitative
Detection Method:	Colorimetric
Specificity:	This assay has high sensitivity and excellent specificity for detection of sheep SAA. No significant cross-reactivity or interference between sheep SAA and analogues was observed. Note: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between sheep SAA and all the analogues, therefore, cross reaction may still exist.
Sensitivity:	0.47 ng/mL

Product Details

Components:

- Assay plate
- Standard
- HRP-conjugate (100 x concentrate)
- Sample Diluent
- HRP-conjugate Diluent
- Wash Buffer (25 x concentrate)
- TMB Substrate
- Stop Solution
- Adhesive Strip
- Stop Solution
- Adhesive Strip

Target Details

Target:	SAA1
Alternative Name:	serum amyloid A1 (SAA1 Products)
Background:	Abbreviation: SAA1 Alias: MGC111216, PIG4, SAA, TP53I4, tumor protein p53 inducible protein 4
UniProt:	P42819
Pathways:	Toll-Like Receptors Cascades

Application Details

Application Notes:	Optimal working dilution should be determined by the investigator.
Sample Volume:	50 μL
Assay Time:	1 - 4.5 h
Plate:	Pre-coated
Protocol:	1. Prepare reagents, samples and standards as instructed.
	2. Set a Blank well without any solution.
	3. Add 50 μ L standard or sample to each well.
	4. Add 50 μL HRP-conjugate (1x) to each well (Not to Blank well).
	5. Incubate 1 hour at 37 °C
	6. Aspirate and wash 5 times.
	7. Add 90 μL of TMB Substrate to each well. Incubate for 20 minutes at 37 °C. Protect from light.
	8. Add 50 μ L Stop Solution to each well. Read at 450 nm within 5 minutes.

 Reagent Preparation: 1. HRP-conjugate (1x) - Centrifuge the vial before opening. HRP-conjugate requires a dilution. A suggested 100-fold dilution is 10 µL of HRP-conjugate + 990 µL of HRP-conjugate. 2. Wash Buffer(1x)- If crystals have formed in the concentrate, warm up to room temp and mix gently until the crystals have completely dissolved. Dilute 20 mL of Wash Buffer (25 x) into deionized or distilled water to prepare 500 mL of Wash Buff 3. Standard Centrifuge the standard vial at 6000-10000rpm for 30s. Reconstitute the 9 with 1.0 mL of Sample Diluent. Do not substitute other diluents. This reconstitution a stock solution of 120 ng/mL. Mix the standard to ensure complete reconstitution the standard to sit for a minimum of 15 minutes with gentle agitation prior to makir dilutions. Pipette 150 µL of Sample Diluent into each tube (S0-S6). Use the stock so produce a 2-fold dilution series (below). Mix each tube thoroughly before the next tr The undiluted Standard serves as the high standard (120 ng/mL). Sample Diluent s the zero standard (0 ng/mL). Note: Kindly use graduated containers to prepare the reagent. Please don't prepare the re directly in the Diluent vials provided in the kit. Bring all reagents to room temperature (18-25 °C) before use for 30 min. Prepare fresh standard for each assay. Use within 4 hours and discard after use. Making serial dilution in the wells directly is not permitted. 	100 fala
 and mix gently until the crystals have completely dissolved. Application Details

	fold dilution can be achieved by adding 5 μ L sample to 45 μ L of Sample Diluent. Complete the 200-fold dilution by adding15 μ L of this solution to 285 μ L of Sample Diluent. The recommended dilution factor is for reference only. The optimal dilution factor should be determined by users according to their particular experiments. 6
Assay Precision:	Intra-assay Precision (Precision within an assay): CV%<8% Three samples of known concentration were tested twenty times on one plate to assess. Inter-assay Precision (Precision between assays): CV%<10% Three samples of known concentration were tested in twenty assays to assess.
Restrictions:	For Research Use only
Handling	
Handling Storage:	4 °C,-20 °C
	4 °C,-20 °C Unopened kit Store at 2 - 8°C. Do not use the kit beyond the expiration date. May be stored for up to 1 month at 2 - 8°C. Coated assay Try to keep it in a sealed aluminum foil bag, plate and avoid the damp. Standard May be stored for up to 1 month at 2 - 8° C. If don't make recent use, better keep it store at HRP-conjugate -20°C. Opened kit HRP-conjugate Diluent Sample Diluent May be stored for up to 1 month at 2 - 8°C. Wash Buffer TMB Substrate Stop Solution *Provided this is within the expiration date of the kit.
