Datasheet for ABIN6975964 MAPT ELISA Kit

Image

#### Overview

| Quantity:                | 96 tests                |
|--------------------------|-------------------------|
| Target:                  | MAPT                    |
| Reactivity:              | Rat                     |
| Method Type:             | Sandwich ELISA          |
| Detection Range:         | 62.5 pg/mL - 4000 pg/mL |
| Minimum Detection Limit: | 62.5 pg/mL              |
| Application:             | ELISA                   |

### Product Details

| Purpose:           | For the quantitative determination of rat tau proteins concentrations in serum, plasma, cerebrospinal fluid (CSF).   |
|--------------------|--|
| Sample Type:       | Cerebrospinal Fluid, Plasma, Serum   |
| Analytical Method: | Quantitative   |
| Detection Method:  | Colorimetric   |
| Specificity:       | This assay has high sensitivity and excellent specificity for detection of rat Tau proteins. No significant cross-reactivity or interference between rat Tau proteins and analogues was observed. Note: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between rat Tau proteins and all the analogues, therefore, cross reaction may still exist. |
| Sensitivity:       | 15.6 pg/mL   |

## Product Details

#### Components:

- Assay plate
- Standard
- HRP-avidin (100 x concentrate)
- Biotin-antibody (100 x concentrate)
- Sample Diluent
- HRP-avidin Diluent
- Biotin-antibody Diluent
- Wash Buffer (25 x concentrate)
- TMB Substrate
- Stop Solution
- Adhesive Strip

# Target Details

| <u> </u>          |   |
|-------------------|---|
| Target:           | MAPT  |
| Alternative Name: | microtubule-associated protein tau (MAPT Products)  |
| Background:       | Abbreviation: MAPT  |
|                   | Alias: DDPAC, FLJ31424, FTDP-17, MAPTL, MGC138549, MSTD, MTBT1, MTBT2, PPND, TAU, G           |
|                   | protein beta1/gamma2 subunit-interacting factor 1 microtubule-associated protein tau, isoform |
|                   | 4   |
| UniProt:          | P19332  |
| Pathways:         | MAPK Signaling, Microtubule Dynamics, M Phase, Regulation of Cell Size                        |

# Application Details

| Application Notes: | Optimal working dilution should be determined by the investigator.                                 |
|--------------------|--|
| Sample Volume:     | 100 µL   |
| Assay Time:        | 1 - 4.5 h  |
| Plate:             | Pre-coated   |
| Protocol:          | 1. Prepare reagents, samples and standards as instructed.  |
|                    | 2. Add 100 $\mu$ L standard or sample to each well. Incubate 2 hours at 37 °C.                     |
|                    | 3. Remove the liquid of each well, don't wash.   |
|                    | 4. Add 100 μL Biotin-antibody (1x) to each well. Incubate 1 hour at 37 °C.                         |
|                    | 5. Aspirate and wash 3 times.  |
|                    | 6. Add 100 μL HRP-avidin (1x) to each well. Incubate 1 hour at 37 °C                               |
|                    | 7. Aspirate and wash 5 times.  |
|                    | 8. Add 90 $\mu L$ of TMB Substrate to each well. Incubate for 15-30 minutes at 37 °C. Protect from |

|                      | light.  |
|----------------------|---|
|                      | 9. Add 50 $\mu L$ Stop Solution to each well. Read at 450 nm within 5 minutes.  |
| Reagent Preparation: | <ol> <li>Biotin-antibody (1x) - Centrifuge the vial before opening. Biotin-antibody requires a 100-fold<br/>dilution. A suggested 100-fold dilution is 10 μL of Biotin-antibody + 990 μL of Biotin-antibody<br/>Diluent.</li> </ol>   |
|                      | <ol> <li>2. HRP-avidin (1x) - Centrifuge the vial before opening. HRP-avidin requires a 100-fold dilution.<br/>suggested 100-fold dilution is 10 μL of HRP-avidin + 990 μL of HRP-avidin Diluent.</li> <li>3. Wash Buffer(1x)- If crystals have formed in the concentrate, warm up to room temperature</li> </ol>   |
|                      | and mix gently until the crystals have completely dissolved. Dilute 20 mL of Wash Buffer<br>Concentrate (25 x) into deionized or distilled water to prepare 500 mL of Wash Buffer (1 x).  |
|                      | 4. Standard Centrifuge the standard vial at 6000-10000rpm for 30s. Reconstitute the Standard with 1.0 mL of Sample Diluent. Do not substitute other diluents. This reconstitution produces a stock solution of 4000 pg/mL. Mix the standard to ensure complete reconstitution and allow the standard to sit for a minimum of 15 minutes with gentle agitation prior to making dilutions. Pipette 250 µL of Sample Diluent into each tube (S0-S6). Use the stock solution to produce a 2-fold dilution series (below). Mix each tube thoroughly before the next transfer. The undiluted Standard serves as the high standard (4000 pg/mL). Sample Diluent serves as the zero standard (0 pg/mL). |
|                      | Note:   |
|                      | <ul> <li>Kindly use graduated containers to prepare the reagent. Please don't prepare the reagent<br/>directly in the Diluent vials provided in the kit.</li> </ul>   |
|                      | • Bring all reagents to room temperature (18-25 °C) before use for 30 min.  |
|                      | <ul> <li>Prepare fresh standard for each assay. Use within 4 hours and discard after use.</li> <li>Making serial dilution in the wells directly is not permitted.</li> </ul>  |
|                      | <ul> <li>Please carefully reconstitute Standards according to the instruction, and avoid foaming and<br/>mix gently until the crystals have completely dissolved. To minimize imprecision caused by<br/>pipetting, use small volumes and ensure that pipettors are calibrated. It is recommended to<br/>suck more than 10 µL for once pipetting.</li> </ul>   |
|                      | • Distilled water is recommended to be used to make the preparation for reagents or samples<br>Contaminated water or container for reagent preparation will influence the detection result.   |
| Sample Preparation:  | <ul> <li>It is recommended to use fresh samples without long storage, otherwise protein degradatio<br/>and denaturationmay occur in these samples, leading to false results. Samples should<br/>therefore be stored for a short periodat 2 - 8 °C or aliquoted at -20 °C (≤1 month) or -80 °C (≤<br/>3 months). Repeated freeze-thawcycles should be avoided. Prior to assay, the frozen<br/>samples should be slowly thawed and centrifuged toremove precipitates.</li> </ul>  |
|                      | <ul> <li>If the sample type is not specified in the instructions, a preliminary test is necessary to<br/>determinecompatibility with the kit.</li> </ul>  |
|                      | • If a lysis buffer is used to prepare tissue homogenates or cell culture supernatant, there is a possibility of causing a deviation due to the introduced chemical substance. The recommended dilution factor is for reference only.   |
|                      | • Please estimate the concentration of the samples before performing the test. If the values  |

|                  | are not in therange of the standard curve, the optimal sample dilution for the particular experiment has to be determined.Samples should then be diluted with PBS (pH =7.0-7.2). |
|------------------|--|
|                  | Note:  |
|                  | Serum and plasma samples require a 20-fold dilution into Sample Diluent. The suggested 20-   |
|                  | fold dilution can be achieved by adding 15 $\mu L$ sample to 285 $\mu L$ of Sample Diluent. The  |
|                  | recommended dilution factor is for reference only. The optimal dilution factor should be   |
|                  | determined by users according to their particular experiments.   |
| Assay Precision: | Intra-assay Precision (Precision within an assay): CV%<8% Three samples of known   |
|                  | concentration were tested twenty times on one plate to assess.   |
|                  | Inter-assay Precision (Precision between assays): CV%<10% Three samples of known   |
|                  | concentration were tested in twenty assays to assess.  |
| Restrictions:    | For Research Use only  |
| Handling         |  |
| Storage:         | 4 °C,-20 °C  |
| Storage Comment: | Unopened kit Store at 2 - 8°C. Do not use the kit beyond the expiration date May be stored for   |
|                  | up to 1 month at 2 - 8°C. Coated assay Try to keep it in a sealed aluminum foil bag, plate and   |
|                  | avoid the damp. Standard May be stored for up to 1 month at 2 - 8° C. If Biotin-antibody don't   |
|                  | make recent use, better keep it store at HRP-avidin -20°C. Biotin-antibody Diluent Opened kit  |
|                  | HRP-avidin Diluent Sample May be stored for up to 1 month at 2 - 8°C. Diluent Wash Buffer  |
|                  | TMB Substrate Stop Solution *Provided this is within the expiration date of the kit.   |
| Expiry Date:     | 6 months   |
