### Target Details

Background:	Synonyms: OTTHUMP0000020651, PH domain containing family A member 1, PH domain-	
	containing family A member 1, PKHA1_HUMAN, Pleckstrin homology domain containing family	
	A member 1, Pleckstrin homology domain containing, family A (phosphoinositide binding	
	specific) member, Pleckstrin homology domain-containing family A member 1, PLEKHA1,	
	Tandem PH domain containing protein 1, Tandem PH domain-containing protein 1, TAPP 1,	
	TAPP-1, TAPP1.	
	Background: This gene encodes a pleckstrin homology domain-containing adapter protein. The	
	encoded protein is localized to the plasma membrane where it specifically binds	
	phosphatidylinositol 3,4-bisphosphate. This protein may be involved in the formation of	
	signaling complexes in the plasma membrane. Polymorphisms in this gene are associated with	
	age-related macular degeneration. Alternate splicing results in multiple transcript variants. A	
	pseudogene of this gene is found on chromosome 5.[provided by RefSeq, Sep 2010]
