| | Background: Component of the Mediator complex, a coactivator involved in the regulated | |
| | transcription of nearly all RNA polymerase II-dependent genes. Mediator functions as a bridge | |
| | to convey information from gene-specific regulatory proteins to the basal RNA polymerase II | |
| | transcription machinery. Mediator is recruited to promoters by direct interactions with | |
| | regulatory proteins and serves as a scaffold for the assembly of a functional preinitiation | |
| | complex with RNA polymerase II and the general transcription factors. This subunit may | |
| | specifically regulate transcription of targets of the Wnt signaling pathway and SHH signaling | |
| | pathway. | |
