Target Details

Background:	<p>Synonyms: Mcp, Crry, mCRY, Complement component receptor 1-like protein, Complement regulatory protein Crry, Protein p65, Cr1l, Cry</p> <p>Background: Acts as a cofactor for complement factor I, a serine protease which protects autologous cells against complement-mediated injury by cleaving C3b and C4b deposited on host tissue. Also acts as a decay-accelerating factor, preventing the formation of C4b2a and C3bBb, the amplification convertases of the complement cascade. Plays a crucial role in early embryonic development by maintaining fetomaternal tolerance. Also acts as a costimulatory factor for T-cells which favors IL-4 secretion.</p>
