Target Details

Background:	<p>Synonyms: Far upstream element-binding protein 2, KHSRP, FUSE-binding protein 2, KH type-splicing regulatory protein, KSRP, p75, FUBP2</p> <p>Background: Binds to the dendritic targeting element and may play a role in mRNA trafficking (By similarity). Part of a ternary complex that binds to the downstream control sequence (DCS) of the pre-mRNA. Mediates exon inclusion in transcripts that are subject to tissue-specific alternative splicing. May interact with single-stranded DNA from the far-upstream element (FUSE). May activate gene expression. Also involved in degradation of inherently unstable mRNAs that contain AU-rich elements (AREs) in their 3'-UTR, possibly by recruiting degradation machinery to ARE-containing mRNAs.</p>
