Background:	<ul> <li>Synonyms: CBS1, MSRB, PILB, CBS-1, CGI-131, Methionine-R-sulfoxide reductase B2,</li> <li>mitochondrial, MsrB2</li> <li>Background: Methionine-sulfoxide reductase that specifically reduces methionine (R)-sulfoxide</li> <li>back to methionine. While in many cases, methionine oxidation is the result of random</li> <li>oxidation following oxidative stress, methionine oxidation is also a post-translational</li> <li>modification that takes place on specific residue. Upon oxidative stress, may play a role in the</li> <li>preservation of mitochondrial integrity by decreasing the intracellular reactive oxygen species</li> <li>build-up through its scavenging role, hence contributing to cell survival and protein</li> <li>maintenance.</li> </ul>
