## Target Details

Background:	Synonyms: hOAT2, liver specific transporter, NLT, Novel liver transporter, OAT2, Organic anion
	transporter 2, Organic anion transporter member 7, Organic anion transporter member 7
	Fragment, S22A7_HUMAN, SLC22A7, solute carrier family 22 (organic anion transporter)
	member 7, Solute carrier family 22, Solute carrier family 22 member 7.
	Background: The protein encoded by this gene is involved in the sodium-independent transport
	and excretion of organic anions, some of which are potentially toxic. The encoded protein is an
	integral membrane protein and appears to be localized to the basolateral membrane of the
	kidney. Alternatively spliced transcript variants encoding different isoforms have been
	described. [provided by RefSeq, Jul 2008]
