Target Details

| Background: | Synonyms: Endoplasmic oxidoreductin-1-like protein B, ER01-L-beta, ER01B, ER01-like protein |
|-------------|---|
| | beta, Oxidoreductin-1-L-beta |
| | Background: Oxidoreductase involved in disulfide bond formation in the endoplasmic reticulum. |
| | Efficiently reoxidizes P4HB/PDI, the enzyme catalyzing protein disulfide formation, in order to |
| | allow P4HB to sustain additional rounds of disulfide formation. Other protein disulfide |
| | isomerase family members can also be reoxidized, but at lower rates compared to P4HB, |
| | including PDIA2 (50 % of P4HB reoxidation rate), as well as PDIA3, PDIA4, PDIA6 and NXNDC12 |
| | (<10 %). Following P4HB reoxidation, passes its electrons to molecular oxygen via FAD, leading |
| | to the production of reactive oxygen species (ROS) in the cell. May be involved in oxidative |
| | proinsulin folding in pancreatic cells, hence may play a role in glucose homeostasis. |
