Target Details

Background:	Synonyms: DEP domain containing 6, DEP domain-containing mTOR-interacting protein, DEP	
	domain-containing protein 6, DEPDC6, DEPTOR, DPTOR_HUMAN.	
	Background: DEPTOR (DEP domain containing MTOR-interacting protein), also known as DEP.	
	or DEPDC6 (DEP domain-containing protein 6), is a 409 amino acid protein that negatively	
	regulates mTORC1 and mTORC2 pathways. DEPTOR interacts with FRAP via its PDZ domain,	
	and undergoes post-translational phosphorylation. Containing two DEP domains and one PDZ	
	(DHR) domain, DEPTOR is encoded by a gene that maps to human chromosome 8q24.12.	
	Chromosome 8 consists of nearly 146 million base pairs, encodes over 800 genes and is	
	associated with a variety of diseases and malignancies. Schizophrenia, bipolar disorder,	
	Trisomy 8, Pfeiffer syndrome, congenital hypothyroidism, Waardenburg syndrome and some	
	leukemias and lymphomas are thought to occur as a result of defects in specific genes that	
	map to chromosome 8.	
Gene ID:	64798	
UniProt:	Q8TB45	
Pathways:	PI3K-Akt Signaling, RTK Signaling, Regulation of Cell Size, BCR Signaling, Warburg Effect
