Target Details

Background: Synonyms: Probable G-protein coupled receptor 75, GPR75,
Background: G protein-coupled receptor that is activated by the chemokine CCL5/RANTES.
Probably coupled to heterotrimeric Gq proteins, it stimulates inositol trisphosphate production and calcium mobilization upon activation. Together with CCL5/RANTES, may play a role in neuron survival through activation of a downstream signaling pathway involving the PI3, Akt and MAP kinases. CCL5/RANTES may also regulate insulin secretion by pancreatic islet cells through activation of this receptor.
