| | Background: Intracellular calcium concentrations are regulated by a family of inositol | |
| | phosphates, which act as second messengers in the calcium cell signaling pathway. ITPK1 | |
| | (inositol 1,3,4-triphosphate 5/6 kinase), also known as ITRPK1, is a 414 amino acid monomer | |
| | that belongs to the ITPK1 family and exists as two alternatively spliced isoforms. Widely | |
| | expressed, ITPK1 is found at highest levels in brain, followed by heart, skeletal muscle, kidney, | |
| | pancreas, liver, placenta and lung. ITPK1 contains one ATP-grasp domain and has been found | |
| | to phosphorylate various. | |
