Background:	Synonyms: Lens fiber membrane intrinsic protein, Lens intrinsic membrane protein 2 19 kDa,	
	Lens intrinsic membrane protein 2, LIM 2, Lim2, LMIP_HUMAN, MP17, MP18, MP19, MP20, To3.	
	Background: This gene encodes an eye lens-specific protein found at the junctions of lens fiber	
	cells, where it may contribute to cell junctional organization. It acts as a receptor for calmodulin,	
	and may play an important role in both lens development and cataractogenesis. Mutations in	
	this gene have been associated with cataract formation. Alternatively spliced transcript variants	
	encoding different isoforms have been found for this gene.[provided by RefSeq, Sep 2009]
