Background:	Synonyms: FLJ26580, Imp 8, Imp8, Importin-8, Importin8, IPO 8, IPO8, IPO8_HUMAN, R	
	binding protein 8, RAN BP8, Ran-binding protein 8, RANBP 8, RANBP8.	
	Background: Seems to function in nuclear protein import, either by acting as autonomous	
	nuclear transport receptor or as an adapter-like protein in association with the importin-beta	
	subunit KPNB1. Acting autonomously, is thought to serve itself as receptor for nuclear	
	localization signals (NLS) and to promote translocation of import substrates through the	
	nuclear pore complex (NPC) by an energy requiring, Ran-dependent mechanism. At the	
	nucleoplasmic side of the NPC, Ran binds to importin, the importin/substrate complex	
	dissociates and importin is re-exported from the nucleus to the cytoplasm where GTP	
	hydrolysis releases Ran. The directionality of nuclear import is thought to be conferred by an	
	asymmetric distribution of the GTP- and GDP-bound forms of Ran between the cytoplasm and	
	nucleus. In vitro mediates the nuclear import of SRP19.
