#### Target Details

Background:	Synonyms: FLJ26580, Imp 8, Imp8, Importin-8, Importin8, IPO 8, IPO8, IPO8_HUMAN, Ran
	binding protein 8, RAN BP8, Ran-binding protein 8, RANBP 8, RANBP8.
	Background: Seems to function in nuclear protein import, either by acting as autonomous
	nuclear transport receptor or as an adapter-like protein in association with the importin-beta
	subunit KPNB1. Acting autonomously, is thought to serve itself as receptor for nuclear
	localization signals (NLS) and to promote translocation of import substrates through the
	nuclear pore complex (NPC) by an energy requiring, Ran-dependent mechanism. At the
	nucleoplasmic side of the NPC, Ran binds to importin, the importin/substrate complex
	dissociates and importin is re-exported from the nucleus to the cytoplasm where GTP
	hydrolysis releases Ran. The directionality of nuclear import is thought to be conferred by an
	asymmetric distribution of the GTP- and GDP-bound forms of Ran between the cytoplasm and
	nucleus. In vitro mediates the nuclear import of SRP19.
