antibodies

## Datasheet for ABIN6981711 anti-VRK2 antibody (AA 151-250) (Alexa Fluor 750)

Overview

| Quantity:            | 100 µL                                                                                                                         |
|----------------------|--------------------------------------------------------------------------------------------------------------------------------|
| Target:              | VRK2                                                                                                                           |
| Binding Specificity: | AA 151-250                                                                                                                     |
| Reactivity:          | Mouse                                                                                                                          |
| Host:                | Rabbit                                                                                                                         |
| Clonality:           | Polyclonal                                                                                                                     |
| Conjugate:           | This VRK2 antibody is conjugated to Alexa Fluor 750                                                                            |
| Application:         | Western Blotting (WB), Immunofluorescence (Cultured Cells) (IF (cc)), Immunofluorescence (Paraffin-embedded Sections) (IF (p)) |

## Product Details

Alternative Name:

| Immunogen:            | KLH conjugated synthetic peptide derived from human VRK2 |
|-----------------------|----------------------------------------------------------|
| Isotype:              | lgG                                                      |
| Cross-Reactivity:     | Mouse                                                    |
| Predicted Reactivity: | Human,Rat,Chicken                                        |
| Purification:         | Purified by Protein A.                                   |
| Target Details        |                                                          |
| Target:               | VRK2                                                     |

VRK2 (VRK2 Products)

| Background: | Synonyms: Serine/threonine-protein kinase VRK2, VRK2, Vaccinia-related kinase 2                  |
|-------------|--------------------------------------------------------------------------------------------------|
|             | Background: Serine/threonine kinase that regulates several signal transduction pathways.         |
|             | Isoform 1 modulates the stress response to hypoxia and cytokines, such as interleukin-1 beta     |
|             | (IL1B) and this is dependent on its interaction with MAPK8IP1, which assembles mitogen-          |
|             | activated protein kinase (MAPK) complexes. Inhibition of signal transmission mediated by the     |
|             | assembly of MAPK8IP1-MAPK complexes reduces JNK phosphorylation and JUN-dependent                |
|             | transcription. Phosphorylates 'Thr-18' of p53/TP53, histone H3, and may also phosphorylate       |
|             | MAPK8IP1. Phosphorylates BANF1 and disrupts its ability to bind DNA and reduces its binding      |
|             | to LEM domain-containing proteins. Downregulates the transactivation of transcription induced    |
|             | by ERBB2, HRAS, BRAF, and MEK1. Blocks the phosphorylation of ERK in response to ERBB2           |
|             | and HRAS. Can also phosphorylate the following substrates that are commonly used to              |
|             | establish in vitro kinase activity: casein, MBP and histone H2B, but it is not sure that this is |
|             | physiologically relevant. Isoform 2 phosphorylates 'Thr-18' of p53/TP53, as well as histone H3.  |
|             | Reduces p53/TP53 ubiquitination by MDM2, promotes p53/TP53 acetylation by EP300 and              |
|             | thereby increases p53/TP53 stability and activity.                                               |
|             |                                                                                                  |

| Gene ID: | 7444   |
|----------|--------|
| UniProt: | Q86Y07 |

## Application Details

| Application Notes: | IF(IHC-P) 1:50-200    |
|--------------------|-----------------------|
|                    | IF(IHC-F) 1:50-200    |
|                    | IF(ICC) 1:50-200      |
| Restrictions:      | For Research Use only |

## Handling

| Format:            | Liquid                                                                                                             |
|--------------------|--------------------------------------------------------------------------------------------------------------------|
| Concentration:     | 1 μg/μL                                                                                                            |
| Buffer:            | Aqueous buffered solution containing 0.01M TBS ( pH 7.4) with 1 % BSA, 0.03 % Proclin300 and 50 % Glycerol.        |
| Preservative:      | ProClin                                                                                                            |
| Precaution of Use: | This product contains ProClin: a POISONOUS AND HAZARDOUS SUBSTANCE, which should be handled by trained staff only. |

| Handling         |                                                                                   |
|------------------|-----------------------------------------------------------------------------------|
| Storage:         | -20 °C                                                                            |
| Storage Comment: | Store at -20°C. Aliquot into multiple vials to avoid repeated freeze-thaw cycles. |
| Expiry Date:     | 12 months                                                                         |
