Target Details

Target:	C5	
Alternative Name:	Complement C5 beta chain (C5 Products)	
Background:	Synonyms: Anaphylatoxin C5a, C5, Complement C5, Complement C5 precursor, Complemen	

component 5, CPAMD4, CO5_HUMAN.

Background: Activation of C5 by a C5 convertase initiates the spontaneous assembly of the late complement components, C5-C9, into the membrane attack complex. C5b has a transient binding site for C6. The C5b-C6 complex is the foundation upon which the lytic complex is assembled.

Derived from proteolytic degradation of complement C5, C5 anaphylatoxin is a mediator of local inflammatory process. It induces the contraction of smooth muscle, increases vascular permeability and causes histamine release from mast cells and basophilic leukocytes. C5a also stimulates the locomotion of polymorphonuclear leukocytes (chemokinesis) and direct their migration toward sites of inflammation (chemotaxis).
