Alternative Name:	14-3-3 beta + zeta (YWHAB/YWHAZ Products)		
Background:	Synonyms: 14-3-3 beta + zeta (phospho S184 + S186), 14-3-3 beta + zeta (phospho S186), 14-		
	3-3 beta + zeta (phospho Ser186), p-14-3-3 beta + zeta (Ser186) 14 3 3 protein beta, 14 3 3		
	protein beta/alpha, 14 3 3 protein zeta/delta, 14 3 3 zeta, HS1, KCIP1, YWHAB, YWHAZ.		
	Background: Members of the 14-3-3 family of proteins are highly conserved proteins, localized		
	in neurons, and are axonally transported to the nerve terminals. They are also present, at lower		
	levels, in various other eukaryotic tissues. 14-3-3 proteins appear to play important roles in a		
	variety of signal transduction pathways, including those involved in cell cycle regulation and cell		
	survival. Because 14-3-3 proteins bind to specific phosphoserine-containing sequences they are		
	likely to have an important role in signaling pathways mediated by serine/threonine protein		
	kinases. Evidence indicates 14-3-3 is required for Raf 1 kinase activity and phosphorylation		
	amoung many other functions.
