Background:	Synonyms: 39S ribosomal protein L20, mitochondrial, L20mt, MGC4779, RM20_HUMAN,
	MGC74465, Mitochondrial ribosomal protein L20, MRPL 20.
	Background: MRPL20 is one of more than 70 protein components of mitochondrial ribosomes
	that are encoded by the nuclear genome. MRPL20 is a subunit of the 39S mitochondrial
	ribosome. Mitochondrial ribosomes (mitoribosomes) consist of a small 28S subunit and a large
	39S subunit. They have an estimated 75 % protein to rRNA composition compared to
	prokaryotic ribosomes, where this ratio is reversed. Another difference between mammalian
	mitoribosomes and prokaryotic ribosomes is that the latter contain a 5S rRNA. Among different
	species, the proteins comprising the mitoribosome differ greatly in sequence, and sometimes in
	biochemical properties, which prevents easy recognition by sequence homology.
