## Datasheet for ABIN6982662 anti-HMGN2 antibody (Biotin)

Overview	Overview			
Quantity:	100 μL			
Target:	HMGN2			
Reactivity:	Rat, Mouse			
Host:	Rabbit			
Clonality:	Polyclonal			
Conjugate:	This HMGN2 antibody is conjugated to Biotin			
Application:	Immunohistochemistry (Paraffin-embedded Sections) (IHC (p))			
Product Details				
Immunogen:	KLH conjugated synthetic peptide derived from human HMGN2/HMG17:2-60/90			
Isotype:	lgG			
Cross-Reactivity:	s-Reactivity: Mouse, Rat			
Purification:	ation: Purified by Protein A.			
Target Details				
Target:	HMGN2			
Alternative Name:	ne: HMGN2/HMG17 (HMGN2 Products)			
Background:	Synonyms: High mobility group (nonhistone chromosomal) protein 17, high mobility group			
	nucleosomal binding domain 2, High mobility group nucleosome-binding domain-containing			
	protein 2, High mobility group protein N2, HMG17, HMGN2, HMGN2_HUMAN, MGC5629, Non			
	histone chromosomal protein HMG 17, Non-histone chromosomal protein HMG-17, Nonhistone

chromosomal protein HMG 17, nonhistone chromosomal protein hmg-17.
Background: The high-mobility group (HMG) proteins 14 and 17 are abundant chromosomal
proteins that bind to nucleosomes and enhance transcription (15). HMG-14 and HMG-17 also
function as architectural elements, which alter the structure of the chromatin fiber and enhance
transcription from chromatin templates (13,5). HMG-14/17 proteins modify the nucleosomal
organization of the 30 nm chromatin fiber and mediate the unfolding of the higher order
chromatin structure thereby facilitating access to the underlying DNA sequence (13). Clustering
of architectural elements, such as HMG proteins and linker histone subtypes into distinct
domains, may lead to structural and functional heterogeneity along the chromatin fiber (13). In
addition, HMG-14 and HMG-17 have been identified as constitutive components of mouse
oocyte and embryonic chromatin that establish a link between the structure of embryonic
chromatin and the normal progression of embryonic development (2). Post-translational
modifications : Phosphorylation favors cytoplasmic localization. Similarity : Belongs to the
HMGN family.

Gene ID:	3151
UniProt:	P05204

## **Application Details**

Application Notes:	IHC-P 1:200-400
Restrictions:	For Research Use only

## Handling

Format:	Liquid
Concentration:	1 µg/µL
Buffer:	Aqueous buffered solution containing 0.01M TBS ( pH 7.4) with 1 % BSA, 0.03 % Proclin300 and 50 % Glycerol.
Preservative:	ProClin
Precaution of Use:	This product contains ProClin: a POISONOUS AND HAZARDOUS SUBSTANCE, which should be handled by trained staff only.
Storage:	-20 °C
Storage Comment:	Store at -20°C for 12 months.
