### Target Details

Background:	<p>Synonyms: G24, MRPL56, Serine beta-lactamase-like protein LACTB, mitochondrial, LACTB, UNQ843/PRO1781</p> <p>Background: This gene encodes a mitochondrially-localized protein that has sequence similarity to prokaryotic beta-lactamases. Many of the residues responsible for beta-lactamase activity are not conserved in this protein, suggesting it may have a different enzymatic function.</p> <p>Increased expression of the related mouse gene was found to be associated with obesity.</p> <p>Alternative splicing results in multiple transcript variants encoding different protein isoforms.</p> <p>[provided by RefSeq, Dec 2013]</p>
