Target Details	
Background:	Synonyms: LOQS, Prbp, RISC loading complex subunit TARBP2, RISC-loading complex subunit
	tarbp2, TAR (HIV 1) RNA binding protein 2, TAR (HIV) RNA binding protein 2, TAR (HIV) RNA-
	binding protein TRBP1, TAR RNA Binding Protein 2, TAR RNA-binding protein 2, tarbp2, Trans-
	activation-responsive RNA-binding protein, TRBP, TRBP1, TRBP2, TRBP2_HUMAN.
	Background: Required for formation of the RNA induced silencing complex (RISC). Component
	of the RISC loading complex (RLC), also known as the micro-RNA (miRNA) loading complex
	(miRLC), which is composed of DICER1, EIF2C2/AGO2 and TARBP2. Within the RLC/miRLC,
	DICER1 and TARBP2 are required to process precursor miRNAs (pre-miRNAs) to mature
	miRNAs and then load them onto EIF2C2/AGO2. EIF2C2/AGO2 bound to the mature miRNA
	constitutes the minimal RISC and may subsequently dissociate from DICER1 and TARBP2. May
	also play a role in the production of short interfering RNAs (siRNAs) from double-stranded RNA
	(dsRNA) by DICER1. Binds to the HIV-1 TAR RNA which is located in the long terminal repeat
	(LTR) of HIV-1, and stimulates translation of TAR-containing RNAs. This is achieved in part at
	least by binding to and inhibiting EIF2AK2/PKR, thereby reducing phosphorylation and inhibition
	of EIF2S1/eIF-2-alpha. May also promote translation of TAR-containing RNAs independently of
	EIF2AK2/PKR.
