Background:	Synonyms: D11S750, MCG4, MGC 4, ZFPL 1, Zinc finger protein like 1, Zinc finger protein	
	MCG4, zinc-finger protein in MEN1 region.	
	Background: Zinc finger protein-like 1 is a 310 amino acid single-pass membrane protein with	
	two zinc fingers at the N-terminus, the second of which is likely a RING domain. The RING	
	domain, which is a 40-60 amino acid, cysteine-rich domain that binds two atoms of zinc, plays a key role in the ubiquitination pathway. The presence of zinc finger-like and leucine zipper-like domains in ZFPL1 suggests a role in DNA binding and transcriptional regulation. ZFP1 is widely expressed in the golgi apparatus and is involved in maintaining golgi structure and regulating	
	the rate of cargo transport.
