	(autosomal dominant), Spastic paraplegia 6 protein, SPG 6, SPG6.	
	Background: This gene encodes a magnesium transporter that associates with early	
	endosomes and the cell surface in a variety of neuronal and epithelial cells. This protein may	
	play a role in nervous system development and maintenance. Multiple transcript variants	
	encoding different isoforms have been found for this gene. Mutations in this gene have been	
	associated with autosomal dominant spastic paraplegia 6. [provided by RefSeq, Nov 2008]
