Target Details

Background:	Synonyms: DIP2 homolog B, DIP2, DIP2B_HUMAN, DIP2 disco interacting protein 2 homolog B
	(Drosophila), Disco interacting protein 2 homolog B, FLJ34278, KIAA1463, MGC104005.
	Background: This gene encodes a member of the disco-interacting protein homolog 2 protein
	family. The encoded protein contains a binding site for the transcriptional regulator DNA
	methyltransferase 1 associated protein 1 as well as AMP-binding sites. The presence of these
	sites suggests that the encoded protein may participate in DNA methylation. This gene is
	located near a folate-sensitive fragile site, and CGG-repeat expansion in the promoter of this
	gene which affects transcription has been detected in individuals containing this fragile site on
	chromosome 12. [provided by RefSeq, Aug 2011]
