|                     | Background: This gene encodes a magnesium transporter that associates with early               |
|                     | endosomes and the cell surface in a variety of neuronal and epithelial cells. This protein may |
|                     | play a role in nervous system development and maintenance. Multiple transcript variants        |
|                     | encoding different isoforms have been found for this gene. Mutations in this gene have been    |
|                     | associated with autosomal dominant spastic paraplegia 6. [provided by RefSeq, Nov 2008]        |
