Target Details

Background:	Synonyms: 41 kDa phosphoribosypyrophosphate synthetase associated protein, 41 kDa phosphoribosypyrophosphate synthetase-associated protein, KPRB, KPRB_HUMAN, MGC117304, MGC126719, MGC126721, PAP41, Phosphoribosyl pyrophosphate synthase-associated protein 2, Phosphoribosyl pyrophosphate synthetase associated protein 2, PRPP synthase-associated protein 2, PRPP synthetase associated protein 2, Prpsap2. Background: This gene encodes a protein that associates with the enzyme phosphoribosylpyrophosphate synthetase (PRS). PRS catalyzes the formation of phosphoribosylpyrophosphate which is a substrate for synthesis of purine and pyrimidine nucleotides, histidine, tryptophan and NAD. PRS exists as a complex with two catalytic subunits and two associated subunits. This gene encodes a non-catalytic associated subunit of PRS. Alternate splicing results in multiple transcript variants. [provided by RefSeq, Sep 2011]
